

# Understanding the ONE Framework

A new standard for responsible research assessment

## What Is the ONE Framework?

The ONE Framework is a **cohort-based, multidimensional evaluation model** that integrates over **70 indicators** across three axes:

- **Performance**
- **Interaction within the Scientific Community**
- **Interaction with Society**

It's designed to offer a **fair, flexible, and evidence-informed** assessment of research careers — aligned with **DORA**, **UNESCO**, and **COARA** principles.

# The Structure: 3 Axes, 11 Dimensions, 70+ Indicators

The ONE Framework is a **cohort-based, multidimensional evaluation model** that integrates over **70 indicators** across three axes:

Each axis groups related dimensions and indicators, allowing custom weighting and analysis for institutions, funders, and researchers.

## ① PERFORMANCE

 **What has the researcher done and how impactful is it?**

- **Academic Impact:** Citations, H-Index, Field/Journal-normalized impact.
- **Academic Excellence:** Highly Cited Papers (HCP) & outstanding papers.
- **Innovation & Originality:** Novelty, interdisciplinarity, disruption.
- **Research Activity:** Volume and consistency of outputs.

 **Key Indicators:** number of publications, normalized impact, HCP10%, interdisciplinarity, Disruptive Score, Documents/Year.

- **Interaction within the Scientific Community**
- **Interaction with Society**

It's designed to offer a **fair, flexible, and evidence-informed** assessment of research careers — aligned with **DORA**, **UNESCO**, and **COARA** principles.

## ② INTERACTION WITH SCIENTIFIC COMMUNITY

 **How does the researcher contribute to and shape their academic field?**

- **Mobility & Collaboration:** International, institutional, and interdisciplinary mobility.
- **Leadership:** PI roles, mentoring, editorial positions, advisor roles.
- **Openness:** Open access, data/software sharing, preprints, labs methods.
- **Community Support:** Peer reviewing, journal boards, community building.
- **Community Recognition:** Awards, invited lectures, advisory roles.

 **Key Indicators:** PI Projects, Open Access %, Networks, distinctions, appointments.

## ③ INTERACTION WITH SOCIETY

 *How does the researcher connect with broader society?*

- **Transference:** Patents, policy citations, public-private collaboration, entrepreneurship.
- **Public Outreach:** General audience talks, science communication, exhibitions, advocacy.
- **Fundraising:** Funding success, diversity of funding sources, EU/US grants.

 **Key Indicators:** Patents, Policy Citations, Philanthropic Projects, Public Talks.

## The ONE Index

The ONE Framework is a **cohort-based, multidimensional evaluation model** that integrates over **70 indicators** across three axes:

- **Performance**
- **Interaction within the Scientific Community**
- **Interaction with Society**

It's designed to offer a **fair, flexible, and evidence-informed** assessment of research careers — aligned with **DORA**, **UNESCO**, and **COARA** principles.

### Key Benefits

- Enables multi-angle assessment: no overreliance on bibliometrics
- Reduces bias with structured, transparent indicators
- Allows narrative-based or indicator-based evaluations
- Supports equitable decisions in hiring, promotion, and funding
